(3) Data Services

Data Verification	
Data Verification is a ledger management tool that uniquely corrects names, ABNs, ACNs, and ARBNs by simultaneously matching records against ATO, ASIC and ABR's Information Warehouse.	What is it used for? - Customer and supplier file maintenance - Database integration for mergers, acquisitions and centralisation occurrences - Supply chain management - Risk management - Marketing - Debt collection initiatives

Information Base	
	Information Base is a web based tool for marketing, allowing users to easily identify target markets based upon the ABR Credit Reporting Database. The facility not only gives users the ability to select information on various predefined fields, but allows a pre-qualification process on the yielded names due to the fact that access to the Credit Report is also available for viewing at the time of use. It is important, however, to understand that not every Company or Business will be in the database, only those companies/businesses that ABR has a Credit Report on will be available.

Infobank	
	Infobank is designed to allow the user to search for corporate entities using different types of parameters. The information returned from a search can be used as a marketing list to prospect new clients. It is also possible to use our on-file credit reporting information to gain full insight into an entity's operation prior to making that all important first call.

Litigation Browse

ABR's Litigation Browse provides clients with a cost effective method of identifying registered court actions made against any company, business or individual.	Litigation Browse has the following search criteria: - Organization/individual name - ACN/ABN - Creditor/Plaintiff Number.
